THE MODERN ADMINISTRATION WORKPLACE

ADLATUS

Rethinking public administration – from application to a legally compliant decision.

LESS ROUTINE WORK. MORE TIME FOR DECISIONS.

ADLATUS takes its name from the Latin “ad latus” (“at your side”) and stands for a dependable companion. It supports people while keeping responsibility in their hands. For public administration, this means an intelligent workspace connecting knowledge, intake channels and specialist systems. ADLATUS coordinates AI agents that research, review documents, capture data and draft administrative decisions.

Example: housing benefit application

1. Application received
2. Documents reviewed
3. Request missing documents
4. Draft decision prepared
5. **Caseworker approves**

Everything in one place

Email, online applications, documents, data and specialist systems come together in one workspace.

Agent orchestration

AI agents research, check, calculate, coordinate follow-up requests and draft decisions.

Knowledge put to work

Internal sources, rules and expert knowledge are available in context for every case.

Connected workflows

Ad hoc tasks become reusable, scalable workflows across the organisation.

Large Process Library

Completed cases become anonymised, validated process patterns for reuse.

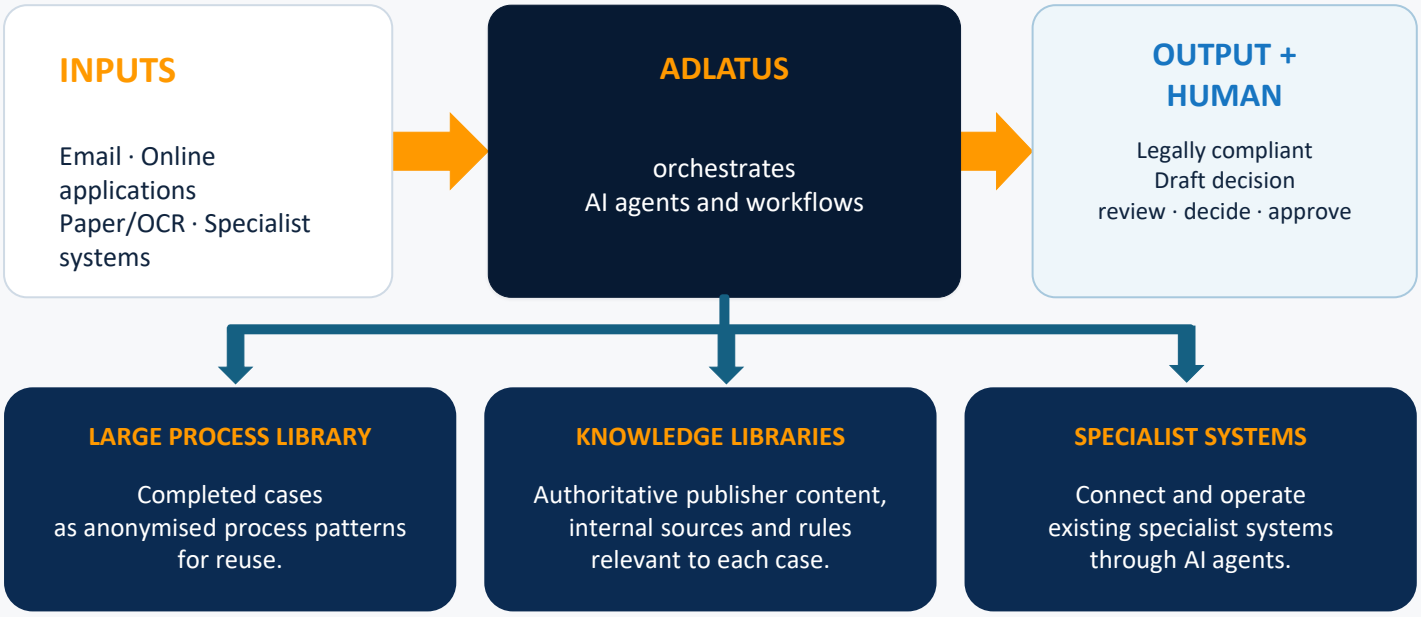
Human oversight

Roles, permissions, approvals and audit trails ensure traceability and preserve public officials’ decision-making authority.

PEOPLE REMAIN ACCOUNTABLE:
REVIEW · DECIDE · APPROVE

ADLATUS makes AI a legally compliant assistant

ADLATUS connects intake channels, specialist systems and process knowledge to coordinate agentic work securely, transparently and at scale.



Shared services and specialist processes create a foundation that learns, connecting previously isolated solutions.

Why ADLATUS?

One workspace

Knowledge, data and tools come together in context to provide personalised assistance and reduce everyday administrative workload.

From workflow to outcome

Reusable process patterns turn information into actionable recommendations. Trusted expert knowledge becomes available to everyone.

Data protection & sovereignty

Control over your data

Personal data stays in source systems. Only abstracted process patterns are shared.

Control and governance

Roles, permissions, approvals and audit trails maintain control, backed by enterprise security on AWS.

Discover ADLATUS.

Book your personal ADLATUS demonstration and see what it can do for you.
